

Dust Filter elements for Food

Pleated Dust Filter Cartridges, Filter panels and Filter cassettes which can be used for food contact

R + B Filter supplies filter elements for dust filtration which can be used for food contact. Their materials are harmless if they come into contact with food.

Applications

R + B filter elements are used in all working processes in the production of pharmaceutical products and food.

Glues

The glues which are used are compliant to FDA law 21 CFR Ch, 1 Part 175 (white list of chemicals). Part 175 describes which chemicals are permitted as indirect food additives like glues and coatings.

Filter media

The filter media can be equipped antistatic, with membrane or coating. They are not hazardous to health when they come into contact with food.

Metal parts

All metal parts of the filter elements are made of stainless steel.

Gaskets

In order to seal the filter elements gaskets made of materials which are suitable for food contact are used.

Service

Filter cartridges, filter panels and filter cassettes made by R + B Filter are adjusted to the respective application. Our technically skilled personnel advises you on the selection of the best suitable filter element for your case of dust filtration.
